PRODUCE

KEY

- Anticipating an up market
- Anticipating a steady market
- Anticipating a down market

All produce pricing trends are based on USDA data as of Oct. 15, 2019.

VEGETABLES

POTATOES

- Russets: The market on russets is up this week. Norkotahs out of Idaho are up on 70 ct., 90 ct. and 6 oz. Reports indicate that there is lighter supply and that demand is exceeding supply. Norkotahs out of Washington/Oregon are up, with light supply and good demand reported.

- Red: The red potato market is up this week. Product out of Minnesota is up. Reports indicate that there is lighter supply and that demand is exceeding supply. Product out of Wisconsin is up, with moderate supply and demand reported.

- Yellow: The yellow potato market out of Florida is steady, with moderate supply, good quality, and good demand reported.

CABBAGE

- Round Green: The cabbage market is up this week. Supplies are steady this week, with good quality and demand reported.

LEAF LETTUCE

- Green Leaf: The green leaf market is up this week. Green leaf supplies are expected to be light for this week, and according to analysts, the market is on the rise. There is occasional irregular sizing and fringe/wind burn. Demand is slowly gaining.

- Romaine: The romaine market is up this week, with supplies reporting as light. There is still occasional fringe/wind burn, insect pressure, twist and seeders in the romaine products. Market prices continue to advance, as analysts point to strong demand.

ICEBERG LETTUCE

The iceberg market is up, with light supplies reporting. The market rose over the weekend. Quality is good, with increased movement out of Mexico.

GARLIC

No garlic issues to report this week on domestic product. Good quality is being reported.

ONIONS

The jumbo yellow onion market is steady this week, including product out of Washington/Oregon and Idaho. There is moderate supply and demand reported.

MUSHROOMS

No issues to report on mushrooms coming from the East Coast with moderate supply and good demand and quality being reported. Crimini supply could become tight as the holidays approach. Supply and quality issues continue for mushrooms off the West Coast.

CILANTRO

The cilantro market is mixed this week. Product out of Oxnard, California is down on 30’s and up on 60’s, with moderate supply and good demand reported. Product out of Central Coast, California is steady on 30’s and up on 60’s, with moderate supply and demand reported. Product out of Mexico is down on 60’s, with moderate supply and good demand reported. Quality will vary out of the domestic growing regions.

CUCUMBERS

Cucumber prices are up for the week. The East has transitioned to fields in Georgia, and the next transition will be in a couple of weeks to Florida. The West continues to see lighter volumes out of the Baja region, which has tightened up supply. Quality is fair.

CELERY

The celery market is up this week, with supply and quality reporting as good.

YELLOW SQUASH

Yellow squash prices are steady to down for the week. Most of the production out of the East is coming from Georgia, with Plant City, Florida, looking to start harvest soon. The West is seeing harvest wind down in California, as they begin to transition to Baja region. Quality on Yellow squash is fair.

ZUCCHINI

Zucchini prices are steady to down for the week. Zucchini is seeing the same transition as yellow squash right now, as they move to new fields. Quality is good on zucchini.

GREEN BEANS

The green bean market is up this week. Machine-picked product out of Eastern Shore Virginia and South Georgia is up, with lighter supply and good demand reported. Green bean growing regions have transitioned south from the Midwest and Northeast. The recent cooler temperatures have slowed down production. Imported haricot verts are up, with light supply and moderate demand reported. Quality will vary by growing region.

BELL PEPPERS

- Green: Green bell peppers continue to be mixed this week in prices. The West is reporting steady to higher prices for the week. Mexico is looking to ramp up production in the upcoming weeks. The East prices are steady to down. North Carolina, Michigan and New York are finishing up harvests, with most of the product coming from Georgia. Florida is expected to ramp up by the end of the month. Quality is a mix of fair to good, depending on the age of the field. Older fields have fair quality, while new fields have good quality.

- Red: Red bell peppers are up this week in pricing. Canada has been battling colder than normal temperatures, which has affected the hothouses. This has tightened up supplies across the country. Quality still looks to be good, with only color issues being reported.

TOMATOES

- Rounds: Round tomatoes are up for the week. Tomato transition has started, as fields begin to transition back down to the Florida region for the fall. Virginia, Tennessee and North Carolina will start to wind down in the upcoming weeks. The West is also transitioning to newer fields, which has tightened up supplies. Quality is mixed with good quality in the East and fair in the West.

- Roma: Roma tomatoes are up in price for the week. Similar to the Round tomatoes, Roma tomatoes have begun to transition to new fields in the West and East. It is expected that volumes will continue to be light in both regions.

- Cherry: Cherry tomatoes are steady to up for the week, as analysts point to supplies tightening up. The only price posting for the week is out of Mexico, crossing at Otay Mesa. Quality is reported as good out of both the East and West.

- Grape: Grape tomato prices are steady to up for the week. Cooler weather has slowed down production in the Baja region. The Grape harvest in the East has slowed down as it transitions South. West Florida has started to post to the USDA. Quality is a mix of fair and good for now.

CARROTS

The jumbo carrot market is steady to down this week. Product out of California is steady, while product out of Mexico is down. There is moderate supply and demand reported out of both regions. There continues to be a wide range in quality out of Mexico.

GREEN ONIONS

The green onion market is mixed this week. Product out of Mexico is down on medium and small, with moderate supply and demand reported. Product out of South Carolina is steady, with lighter supply and good demand reported. Quality will vary by growing region.

## PRODUCE

### CAULIFLOWER ⬆️
The cauliflower market is up this week, with supplies reporting as light. Reported production issues in California continue to drive the market, according to analysts. Prices are high, as quality remains questionable, with some slight discoloration to report. There is a slight increase in movement out of Mexico.

### ASPARAGUS ⬆️
The asparagus market is mixed this week. Product out of Peru is up, with moderate supply and demand reported. Product out of Mexico is down, with moderate supply and light demand reported. Quality will vary by growing region.

### BROCCOLI ⬆️
The broccoli market is up this week, with supplies reported as light. Supplies are expected to be hit or miss for the remainder of the Salinas season, due to heat damage. Mexico production is expected to increase later this week and into next week as the season begins. Quality and condition are both improving out of Mexico. The demand is good.

### HANGING FRUIT

#### APPLES AND Pears

- **Apples**: All apple varieties out of Washington are steady this week, with moderate supply and demand reported, except Red Delicious, which is seeing lighter supplies.
- **Pears**: The pear market out of Washington remains stable, with moderate supply, good quality and lighter demand reported.

#### CITRUS

- **Lemons**: Lemon prices continue to be steady to down for the week. Supplies continue to be tight, and the price is being reported as higher for the time being.
- **Limes**: Lime prices continue to be steady to down for the week. Large-size limes continue to be in tight supply, so the price remains steady on those sizes. The USDA currently isn’t reporting on 110’s or 150’s. Vendors report quality appears to be good after the recent rainstorms.
- **Oranges**: Valencia orange prices look to be steady for another week. Supplies on 113’s to 138’s remain tight. Valencia harvest is expected to last until mid-November, while California Navelas are expected to start their harvest near the end of October. Quality is fair to good for the time being.

#### BERRIES

### STRAWBERRIES

- The strawberry market is down this week. Over the past several weeks, California strawberry production, demand and movement have all fluctuated widely. Overall quality continues to be a challenge, especially from fields in Watsonville and the inland growing regions of Salinas. Newer plantings in Oxnard are producing the best quality available in the market. The weather in all growing regions has been cooperating, with mild days and cool nights. The industry can expect better berries coming soon, as Mexico is expected to begin packing preliminary volumes by the end of this week.

### BLUEBERRIES

- The blueberry market is up this week. Production out of Mexico is expected to increase, and the quality of the fruit is looking good. Chilean blueberries are reported as good in size and firmness.

#### APPLES AND PEARS

- **Apples**: All apple varieties out of Washington are steady this week, with moderate supply and demand reported, except Red Delicious, which is seeing lighter supplies.
- **Pears**: The pear market out of Washington remains stable, with moderate supply, good quality and lighter demand reported.

#### CITRUS

- **Lemons**: Lemon prices continue to be steady to down for the week out of California. Desert crops continue to ramp up production. 165 counts and larger sizes remain in tight supply out of both growing regions. Chile continues to wind down their harvest, as their season nears the end. Mexico is also reporting an increase in price on lemons. Quality still is fair for the time being.
- **Limes**: Lime prices continue to be steady to down for the week. Large-size limes continue to be in tight supply, so the price remains steady on those sizes. The USDA currently isn’t reporting on 110’s or 150’s. Vendors report quality appears to be good after the recent rainstorms.
- **Oranges**: Valencia orange prices look to be steady for another week. Supplies on 113’s to 138’s remain tight. Valencia harvest is expected to last until mid-November, while California Navelas are expected to start their harvest near the end of October. Quality is fair to good for the time being.

#### TROPICAL

### PINEAPPLES

- Pineapple prices are steady to down for the week. Sizes continue to trend toward the larger range. Quality continues to be good.

### BANANAS

- Banana prices continue to be steady for another week. Supply continues to be good, with no quality issues being reported.

### AVOCADOS

- Avocado prices continue to be mixed this week. Sizing continues to trend toward smaller sizes, 60 to 84 cts. Larger sizes between 32’s and 48’s have increased in price, while 60’s and smaller have decreased in price. #2 supply continues to be less than 5% of the current harvest.

### MELONS

#### CANTALOUPES AND HONEYDEWS

- **Cantaloupes**: The cantaloupe market is up this week. The market continues to improve, and the price is being reported as higher next week.
- **Honeydews**: The honeydew market is up this week. Production and volume are still tight. The size profile is geared to the 5 jumbo and 5 ct., with limited volume on 6 ct.
All current beef pricing trends are based on USDA data as of Oct. 16, 2019. Last week’s trends refer to the USDA market for the full week of Oct. 7, 2019.

Cash cattle traded between $108-$111/cwt. last week. This week’s cash asking prices from feeders are listed from $112-$114/cwt.

Last week’s ending harvest came in at 645K head, up 6K from the previous week, and of that, 503K were of the steer/heifer variety.

The grade for the week ending Oct. 4, 2019 came in with 77.4% of all the steers and heifers grading Choice or higher, up 0.6% from the week prior. Select product was down at 18.8%, and Ungraded reported down at 3.8%.

GRINDS

GROUND CHUCK: The ground chuck market saw a slight decline last week. This market historically declines through early October before seasonal gains through mid-November.

GROUND BEEF 81/19: 81/19 ground beef saw a slight decline last week. Like ground chuck, 81-blend ground beef historically declines through early October before seasonal gains into November.

GROUND BEEF 73/27: The 73/27 ground beef market traded up by a few cents last week. The 73-blend ground beef market is historically like ground chuck and 81/19 ground beef in terms of the short-term outlook.

RIBS

RIBEYES: Graded ribeyes also increased in price last week. Ribeyes have been in short supply, especially light ribeyes, and analysts are seeing the start of the seasonal increases that should continue into the late fall.

CHUCKS

CHUCK ROLLS: Chuck rolls traded up slightly on both grades last week. Three days into the current week, the chuck roll market appears to be on a similar trajectory to last week.

TERES MAJORS: All graded Teres Majors traded up sharply last week, with availability posing an issue with some packers. Historical data suggests that the Teres Major market typically trades flat to slightly up through the remainder of the year, although analysts are projecting another sharp increase this week due to supply issues.

BRISKETS: Briskets took a price increase last week. The brisket market typically takes a slow climb through the remainder of the year; however, the USDA market is currently more expensive for briskets than it has historically been over the last three years during this time of the year. Analysts believe this market could be steady to down entering the fall season.

THIN MEATS

BALL TIPS: Ball tips traded up a few cents across the board last week. This market historically bottoms out in early October before flattening out to close the year.

FLAP MEAT: Choice flap meat traded down last week, while the Select grade saw an increase in price. Like ball tips, historical data suggests that this market will bottom out in early October.

FLANK: Choice-graded flanks were up last week, but Select product traded down. Historical data would suggest that this market will take a slow decline through the remainder of the year.

SKIRT STEAK: The outside skirt market traded at a slight discount last week. Historical data suggests that the outside skirt market will trade lower through mid-October before flattening out in November and December.
Pork market information is from the week of Oct. 7, 2019. Last week the USDA estimated hog slaughter was 2.725 MM, 2% higher than the previous week, and roughly 9% over the same week last year.

**LOINS**
Prices in the loin complex were firm to higher. Boneless loin prices held steady, and bone-in loins moved moderately higher. Pork loin promotions in retail are currently being reported as heavier than last year. Historically, loins begin to move lower from now through late November.

**TENDERS**
Pork tenderloin prices moved higher. Historically, pork tenderloin prices trend lower into November.

**BUTTS**
Pork butt prices held steady. Previously reported out-front sales and exports were noted as strong. Historically, butt prices begin to trend lower into November also.

**RIBS**
The rib complex continued to trade higher. Historically, rib prices find a floor sometime in the October-November timeframe before they begin to trend higher.

**BELLIES/BACON**
While the belly markets continued to average higher, analysts report that early-week trades may suggest an end to this very sharp and brief rally. According to analysts, market pricing may be reaching levels considered prohibitive from a promotional standpoint in the retail channel. A similar bell curve happened last year, and belly prices moved lower into early December.

**HAMS**
Bearish tones continued with the ham primal as trade levels push lower. Historically the ham market is steady to weaker until late November, when last-minute holiday ham demand comes into play. Large harvest levels could put additional downward pressure on pricing, according to analysts. With hams being a key export and holiday item, volatility is possible for the balance of the year, according to analysts.

**TRIMMINGS**
Trimming prices continued lower. Historically, trimming prices peak by early October, and then trend lower into December. Analysts report that larger harvest levels may be contributing to downward pressure on trimmings.

**PICNICS**
The picnic complex continued to move higher. Based on previous years, bone-in picnics historically move higher for the balance of the year, whereas the boneless picnics trend lower.
The data contained in the Farmer’s Report is provided for informational purposes only, is not tailored to your specific needs, and is not intended as a substitute for any other publicly-available market data or information. The Farmer’s Report is compiled from the last-received market data provided by the United States Department of Agriculture (USDA) and/or other market sources, and is subject to change without notice. US Foods neither assumes any legal liability nor makes any warranty or guaranty, either express or implied, regarding the completeness, accuracy or usefulness of this information.

**Starting in 2018, the 19 State totals have been discontinued.**

### TURKEY

**BONELESS, SKINLESS TURKEY BREASTS**

Boneless, skinless turkey breasts were flat this week. In the near term, analysts expect a flat to slightly upward market.

**WHOLE FROZEN TURKEY**

The whole turkey market was flat this week. Analysts expect this market should trend flat to slightly upward as vendors begin setting up for the holidays.

### CHICKEN

Poultry market information is from the week of Oct. 14, 2019.

This week small, medium and jumbo wing markets saw declines, while select, medium and jumbo boneless breasts were unchanged over the past week. In the near term, analysts forecast that these markets should trend flat to downward. Analysts are referencing the USDA projections of increased jumbo headcount, along with decreased demand going into the fall season, could push jumbo breast prices lower this fall. Jumbo and small tenders continued to decline this week, as demand continues to be unsettled, according to reports. Analysts state the demand in this market from retail and further processors has continued to be weak, however, they also state that this could change rapidly if Further Processors step back into these markets.

Export demand continues to be reported as balanced, with domestic demand declining slightly. Leg quarters, thigh meat and bone-in thighs were unchanged this week. With increasing jumbo supply, analysts predict these markets could trend flat to downward in the near term. Whole birds/WOG demand is balanced for now. As supply increases, analysts report that this could result in a flat to slightly downward market trend.

**BROILER-TYPE EGGS SET IN THE UNITED STATES UP 1%**

Hatcheries in the United States weekly program set 220 million eggs in incubators during the week ending Oct. 12, 2019, up 1% from a year ago. Average hatchability for chicks hatched during the week in the United States was 82.3 percent. Average hatchability is calculated by dividing chicks hatched during the week by eggs set three weeks earlier. **Starting in 2018, the 19 State totals have been discontinued.**

**BROILER-TYPE CHICKS PLACED IN THE UNITED STATES UP 3%**

Broiler growers in the United States weekly program placed 182 million chicks for meat production for the week ending Oct. 12, 2019, up 3% from a year ago. Cumulative placements from the weeks ending Jan. 5, 2019 through Oct. 12, 2019 for the United States were 7.64 billion, up 2% from the same period a year earlier. **Starting in 2018, the 19 State totals have been discontinued.**

**WHOLE CHICKEN & CUT-UP PARTS**

Analysts report that small bird supply and demand is still out of balance, pushing pricing higher when demand is harder to fulfill. Analysts believe this trend may continue through 2019. The market for larger-size whole birds and WOGs is in a balanced market. As jumbo bird availability increases, analysts believe this could develop into slight decreases in pricing for the near term.
SOY, CANOLA AND PALM OIL

SOY OIL:
- The December soybean oil contract traded back above the $.3000 level the week of Oct. 7, 2019.
- On Friday, Oct. 11, 2019 the U.S. announced a partial trade deal had been reached with China. Tariff rate increases that were to have gone into effect on October 15th have been suspended, but all previous tariffs remain in place for now. Phase One of the deal is said to have China buying up to $40 to $50 billion worth of U.S. agricultural goods annually on a scale-up basis.
- Media reports state the Trump administration has moved closer to a deal on domestic biofuel policy that would increase the mandated blending rate starting in 2020.
- NOPA reported the August domestic soybean crush at a monthly record high of 168.1 million bushels. End-of-August soybean oil stocks were stated at 1.4 billion pounds, down 67 million from July.

CANOLA OIL
- It is being reported that wet and snowy weather conditions are hindering the Canadian canola crop harvest, where total production is expected to be at a four-year low. Analysts report canola oil basis still remains soft, as seed stocks will continue to build until Canada resolves their dispute with China.

PALM OIL
- The Malaysian Palm Oil Board estimated end-of-September palm oil stocks at 2.448 million metric tons, up from 2.240 MMT at the end of August.

DAIRY

All dairy pricing trends are based on USDA and CME data as of Oct. 16, 2019.

BUTTER
Analysts report the recent declines in butter have churned up some extra demand from buyers, leading to a slight recovery in butter prices. Butter production is steady across the country, with churns able to buy as much cream as they need. Analysts expect to see some additional slowdowns in production, with producers likely trying to manage their inventories, but the price outlook remains steady to lower for the balance of the year.

CHEESE
Analysts report steady-to-higher demand has been the main catalyst for the recent surge in prices, as the overall supply situation has struggled to keep up. The higher prices have incentivized very strong production in the East and West, with only the Midwest noting some variable rates, due to the more expensive milk and limited availability. The strong production rates should start to improve the overall supply situation. Analysts also point out that at current prices, the U.S. is not competitive into the global market for exports. Seasonally, analysts expect some weakness as we head further into Q4.

SHELL EGGS
Analysts believe current prices should continue to incentivize some additional promotional activity and stockpiling, which is starting to materialize with retail and foodservice. Seasonally, the current market is well below the average prices for this time of year, as we head into the stronger demand period ahead of the holiday/baking seasons. As demand improves into the fall/winter, analysts believe prices should remain steady to up.

MILK & CREAM
Class I and Class III milk prices are now at their highest level in a few years, as analysts point to school demand ramping up and lower milk production. Vendors are indicating that UHT heavy cream prices could decline slightly as we get further into October.
The data contained in the Farmer’s Report is provided for informational purposes only, is not tailored to your specific needs, and is subject to change without notice. Nothing herein is the opinion of US Foods®. US Foods® neither assumes any legal liability nor makes any warranty or guaranty, either express or implied, regarding the completeness, accuracy or usefulness of this information.

**SHRIMP, DOMESTIC**

(Whites and Browns): The fall White shrimp season is starting to get into full swing. Boats are re-gearing their nets to catch white shrimp as they transition away from brown shrimp. Boats with gear for Brown shrimp still on will make one more cycle, and that will be it for the year. According to our vendors, the Brown season is very well below normal.

(Domestic PUDs): Smaller PUD’s are becoming tight as they have been pushed further out into the Gulf of Mexico with the influx of water coming out of the Mississippi River, which traditionally puts pressure on this category.

**SHRIMP, IMPORTED**

(Black Tigers and Whites): The seafood industry reports stable pricing on Tigers. They are, however, seeing bidding to move white shrimp, thus causing a steady to weaker market.

(Mexican Browns and Whites): Analysts report that suppliers may have a concern on Browns as well as large size shrimp that are in very tight supply. The 2019 fall season is underway as Brown shrimp inventory is reported to be only 1/3 of what the industry expected. The White season is going strong, with landings every day.

**CATFISH**

Domestic: Production has slowed, as the industry points to poor feeding and a strong need for fish in the marketplace. It is reported that packers are raising prices, as the pond price for live fish has increased. Vendors are reporting that they expect a steady flow of product starting this month.

Imported: Urner Barry reported higher prices due to the Chinese consuming more fish, because of the lack of pork caused by the African Swine Fever outbreak.

**SALMON**

Atlantic Farmed Salmon: Analysts report that the frozen market is stable at the moment, but vendors are offering some spot opportunity. Vendors also indicate that there is still a concern that 4 oz. portions will get tight, as the size of fish needed to produce 4 oz. is in short supply.

**MAHI-Mahi**

Analysts report that pricing has turned steady, with fewer offerings. Inventory is in good shape along all size portions. The 2019/2020 season is getting underway in Peru now.

**SCALLOPS**

Sea: Reports indicate that pricing has shown some volatility on the fresh side. Frozen prices continue to be stable to slightly down.

Bay: Pricing is stable for next week, but analysts indicate bay scallops could move higher, with further receipts that would have the additional tariff associated with it.

**TILAPIA**

Demand has been steady, as analysts point to the market settling into higher costs.

**PANGASIUS**

Pricing has moved to a steady to weaker tone, as reported inventory levels on 5-7’s and 7-9’s are in good supply. There are some reports that 3-5’s are tight. Sources are pointing to weaker pricing for the last quarter of the year.

**WHITEFISH COMPLEX**

**Cod:** It is reported that pricing is showing some firmness. Reports indicate that inventory is firm behind strong demand, as other similar species increase in price.

**Pollock:** The fishery for Pacific pollock has produced only smaller, 2-4 oz. fillets. Analysts expect that this could cause an inventory issue for frozen loins if they don’t start catching larger fish. Larger fillets 4-6 oz. and 6-8 oz. are very tight. In addition, the industry is starting to plan for a new 15% tariff that is expected to go into effect on Dec. 15, 2019.

**Haddock:** Vendors are reporting that pricing is expected to continue to firm, due to high demand and tight supply, as well as additional tariffs.

**Flounder:** Inventory levels are in good shape. Vendors report seeing lower pricing on Argentine fillets as they have reported more inventory in the U.S. than they want to hold.

**Tuna, Yellowfin**

(Frozen Steaks & Loins): Analysts report that tuna pricing and inventory is stable.

**Swordfish**

Analysts report that swordfish pricing is stable. Inventory levels are in very good shape.

**King Crab**

(Red & Golden): Analysts report product is very short in the marketplace, and is expected to be tight ongoing. Golden product of Russia is increasing in price. Operators should start booking holiday needs now.

**Crabmeat**

(Blue & Red, Pasteurized): Analysts report that the blue swimming crab market is seeing some price relief.

Mexico Blue Crab season is in full production now on both the East and West Coast. Distributors should see more inventory imported into the U.S.

**Snow Crab**

**Alaskan:** Most vendors are off the market, with very little if any product out there currently. The 2019/2020 quota has been announced; there will be an increase of 20-25%, and the expectation is the majority of the catch will fall into the 5-8 oz. size range.

**Canadian:** Production has ended in Canada. Vendors are reporting that all sizes are getting tight with inventory. Urner Barry is reporting higher pricing now on all size clusters. Distributors will have to start looking at Russia and Norway for additional product.

**Lobster**

**North American Lobster:** Pricing is moving higher on tails, as production is very slow. Vendors are reporting poor inventory levels. Operators should review holiday needs now.

**Lobster Tails, Warm Water:** Vendors are reporting the harvest will be off at least 40% due to the impacts of Hurricane Dorian. It is expected that overall demand and lack of inventory will continue to put ongoing pressure on this category. Analysts expect this trend to be ongoing.

**Lobster Meat:** Pricing is moving up, and demand is reported as steady. The fall pack continues to be down YOY, causing an inventory concern.
