

# US Foods takes action to reduce GHG emissions

- Following an analysis of different climate scenarios, US Foods has committed to and is pursuing SBTi validation for the following green house gas (GHG) emissions reduction goals:
  - 🌱 **US Foods commits to reduce absolute Scope 1 and 2 GHG emissions by 32.5% by 2032 from a 2019 base year.**
  - 🌱 **US Foods commits that 35% of its suppliers by emissions, covering 71% of purchased goods and services, will have science-based targets by 2027.**
- US Foods commitment to engage with its suppliers to set targets will support its continuing efforts to create environmental awareness in its industry and consult with stakeholders on environmental issues

✓ **Reported Scope 1 and 2 emissions to CDP for 2021 and baseline Scope 3 emissions for 2019<sup>(1)</sup>:**

- Scope 1: 591,416.393 metric tons CO<sub>2</sub>e
- Scope 2: 155,365.829 metric tons CO<sub>2</sub>e
- Scope 3: 22,319,283.09<sup>(2)</sup> metric tons CO<sub>2</sub>e

✓ **Targets are integrated with business strategy and financial planning under US Foods' Long-Range Plan announced earlier in 2022**

✓ **Commitment to report progress against targets in US Foods' annual Corporate Social Responsibility Report and via CDP's annual Climate Change questionnaire**

(1) Calculated following both the average-data method and spend-based method. The majority of our emissions were calculated using the weight of produce and protein purchased and were multiplied against their corresponding emissions factors which were derived from the EcolInvent or AGRIBALYSE 3.0.1 databases. All other purchased goods and service spend data was input into the GHG Protocol / Quantis Scope 3 Evaluator tool, which is based off the GHG Protocol's Technical Guidance for Calculating Scope 3 Emissions. The emissions data outputs (21246742.52 MT CO<sub>2</sub>e) are from a screening performed on US Foods's 2019 data as a baseline for its target reductions.

(2) Scope 3 consisted of metric tons CO<sub>2</sub>e from: Purchased goods and services - 21,246,742.52 Capital goods - 71,434.74; Fuel and energy related activities - 302,382.85; Upstream transportation & distribution - 364,198.09; Waste generated in operations - 10,799.20; Business travel - 27,692.91; Employee commuting - 20,400.00; Processing of sold products - 198.64; End-of-life treatment of sold products - 270,436.44 and Investments - 5,196.36. Other Scope 3 emissions categories were determined to be not applicable.

# Various initiatives support our climate goals

## Scope 1 reduction initiatives:

- ✓ Optimizing routing to reduce miles driven
- ✓ Deploying new vehicle technology
- ✓ Use of alternative fuels for vehicles:
  - 🌱 - Compressed natural gas (CNG)
  - 🌱 - Renewable natural gas
  - 🌱 - Renewable diesel fuel
  - 🌱 - Electronic vehicles (EV)

### **New fleet additions:**

🌱 - 30 new EV trucks by 2023

🌱 - 42 new CNG vehicles by the end of 2022

## Scope 2 reduction initiatives:

- ✓ Investing in renewable energy such as solar array installations
- ✓ Accelerating the adoption of energy-efficient equipment and technologies

## Scope 3 reduction initiatives:

- ✓ Collaborating with our suppliers to encourage them to set science-based targets by 2027 and to support them in their climate change actions
